## CARE FOR CAREGIVERS

### **SIGNS OF CAREGIVER STRESS:**

Stress has different symptoms for different people. Be on the lookout for significant changes in behavior or emotion. A normally calm, patient person may become irritable or weepy when things go wrong, or a usually neat person may become disorganized. Following are some behavior changes that are very common in caregivers experiencing stress.

- Frequently feeling angry at the person you are caring for.
- Overreacting to minor frustrations with doctors, paid caregivers or other service providers.
- Being unusually irritable with family members.
- Feeling overwhelmed all the time.
- Withdrawing from contact with family or friends.
- Feeling anxious or worried all the time.
- Feeling depressed or hopeless.
- Feeling that you are alone and that no one understands your situation.
- Problems sleeping even though you are physically tired.
- Worsening of chronic health conditions such as high blood pressure, diabetes, or headaches.
- Being unable to concentrate, forgetful, or unusually disorganized.

### **COPING STRATEGIES FOR CAREGIVERS:**

What if you do observe many of these changes in yourself or someone you love? Again, the solutions must be tailored to the individual. Here are some strategies that many caregivers have found helpful. Start by trying to add just one at a time—don't make this list another source of stress!

- Physical exercise.
- Healthy eating.
- Getting the information you need to make good caregiving decisions and feel more in control.
- Social support (support groups, counselors, or friends).
- Meditation, prayer or just quiet time alone.
- Participation in a faith community.
- Recreational or social activities that are satisfying and nourishing
- Finding positive ways to think about your caregiving responsibilities and the time that you spend with your loved one.
- Remember to enjoy and laugh with the person who you are caring for.
- **Time off from your caregiving responsibilities!**

## CARE FOR CAREGIVERS:

### TEN TIPS FOR CAREGIVERS:

1. **Take one day at a time.** Caregiving is a roller coaster ride. There will be good days and bad days. Taking each day as it comes and being careful not to look too far into the future for yourself or the care recipient can lower your stress level.
2. **Get adequate rest.** Fatigue is the enemy of effective caregiving. It can lead to everything from a breakdown in your immune system to making mistakes when giving medications to the care recipient. If possible, take short combat naps when opportunities present themselves.
3. **Identify your stressors.** Different caregiving activities stress different people. Maybe you can arrange for someone else such as a family member, friend or professional to perform the tasks that you find stressful. If not, find ways to perform the task and reward yourself afterward.
4. **Use your support system.** The key to building a positive support system is to know what type of specific support you need...and then ask for it or create a plan to get it. When family and friends offer support, tell them exactly what you need. Don't expect them to read your mind.
5. **See your physician.** Ask him or her how the stresses of caregiving may affect chronic conditions you may be experiencing. Also, realize that accepting the offer of medication that helps you deal with stress and anxiety is not weakness...just be careful not to overmedicate yourself.
6. **Keep things in perspective.** Care recipients seldom try to make your life more difficult. They are often in pain, fearful, confused or unable to distinguish between reality and fantasy. Also, ask yourself if you have realistic expectations of your caregiving experience. What are your expectations of the condition (present and future) of the care recipient; what do you expect from family members; what do you expect from service organizations? Unrealistic expectations that are not met increase stress dramatically.
7. **Learn as much as you can.** Take advantage of all the information resources from associations, government agencies, the media, the Internet, local libraries, support group and other caregivers. Create a notebook or file (paper and computer) with all the information you gather. Also, be familiar with financial and legal implications of your caregiving role. You may be able to find an attorney and/or accountant in your area who specializes in issues related to caregiving.
8. **Simplify, simplify, simplify.** Let's face it; caregiving creates a different life for you. Caregiving experts suggest that you retain the life activities that make you feel like yourself, but you won't be able to do everything. Try to simplify your life in terms of activities, duties and obligations as much as possible. By clearing some of your schedule, you provide more time for caregiving activities and rest.
9. **Be good to yourself.** Give yourself credit for the good that you do instead of being hard on yourself when you get frustrated, impatient, sad or angry. Give yourself tangible rewards for getting through a difficult day or situation. Plan ahead for rewards at significant dates such as the end of a year or your monthly or yearly anniversary as a caregiver.
10. **Realize that your sense of humor may be your #1 coping tool.** Look for opportunities to laugh, both inside and outside the caregiving activities. Any opportunities to laugh and find a lighter heart with the care recipient are bonuses. Laughter creates better health and reduces stress.

## **DISASTER PREPAREDNESS**

### **DISASTER SUPPLY CHECKLIST:**

A basic Disaster Supply Kit is essential in preparing for any natural or manmade disaster. Make sure you have these items available in your home at all times, and check your list at least twice a year—before hurricane season and before the onset of winter weather. Check again when bad weather is predicted.

- First Aid Kit and essential medications.
- Battery-powered radio.
- Flashlight(s).
- Extra batteries for radio and flashlights.
- Canned food and can opener.
- Bottled water (at least 3 gallons per person).
- Clothing, including outdoor gear.
- Blankets or sleeping bags.
- Supplies of special items needed for elderly or disabled, such as incontinence products or medical supplies.

## **WINTER STORM**

### **Prepare a Winter Storm Plan:**

- Check your Disaster Supply Kit.
- Have extra blankets on hand.
- Ensure that each member of your household has a warm coat, gloves or mittens, hat and water resistant boots.
- Assemble a Disaster Supplies Kit for your car, too.
- Have your car winterized before winter storm season.

### **Stay Tuned for Storm Warnings:**

- Listen to NOAA Weather Radio and your local radio and TV stations for updated storm information

### **Know What Winter Storm WATCHES and WARNINGS Mean:**

- A winter storm WATCH means a winter storm is possible in your area.
- A winter storm WARNING means a winter storm is headed for your area.
- A blizzard WARNING means strong winds, blinding wind-driven snow and dangerous wind chill are expected. Seek shelter immediately!

### **When a Winter Storm WATCH is Issued:**

- Listen to NOAA Weather Radio, local radio, and TV stations for further updates.
- Be alert to changing weather conditions.
- Avoid unnecessary travel.

### **When a Winter Storm WARNING is Issued:**

- Stay indoors during the storm.
- If you must go outside, several layers of lightweight clothing will keep you warmer than a single heavy coat.
- Gloves (or mittens) and a hat will prevent loss of body heat. Cover your mouth to protect your lungs.
- Understand the hazards of wind chill, which combines the cooling effect of wind and cold temperatures on exposed skin. As the wind increases, heat is carried away from a person's body at an accelerated rate, driving down body temperature.
- Walk carefully on snowy or icy sidewalks.
- After the storm, if you shovel snow, be extremely careful. It is physically strenuous work, so take frequent breaks.
- Avoid overexertion.
- Avoid traveling by car in a storm, but if you must:
  - Carry a Disaster Supplies Kit in the trunk.
  - Keep your car's gas tank full for emergency use and to keep the fuel line from freezing.
  - Let someone know your destination, your route, and when you expect to arrive. If your car gets stuck along the way, help can be sent along your predetermined route.
- If you do get stuck:
  - Stay with your car. Do not try to walk to safety.
  - Tied a brightly colored cloth (preferably red) to the antenna for rescuers to see.
  - Start the car and use the heater for about 10 minutes every hour.
  - Keep the exhaust pipe clear so fumes do not back up in the car.
  - Leave the overhead light on when the engine is running so that you can be seen.
  - As you sit, keep moving your arms and legs to keep blood circulating and to stay warm.
  - Keep one window away from the blowing wind slightly open to let in air.

## **HURRICANE**

### **Prepare for a Hurricane Emergency:**

- Check your Disaster Supply Kit.
- Make sure you have raingear and clothing for warm weather.
- Make sure you have a road map in your car in case of evacuation.

### **Know What Hurricane WATCH and WARNING Mean:**

- WATCH: Hurricane conditions are possible in the specified area of the Watch, usually within 36 hours.
- WARNING: Hurricane conditions are expected in the specified area of the Warning, usually within 24 hours.

### **Prepare a Personal Evacuation Plan:**

- Identify ahead of time where you could go if you are told to evacuate. Choose several places—a friend's home in another town, a motel, or a shelter. Give a copy of the list to out of town family members so they will know where you plan to go.
- Keep handy the telephone numbers of these places as well as a road map of your locality. You may need to take alternative or unfamiliar routes if roads are closed or clogged.
- Listen to NOAA Weather Radio or local radio or TV stations for evacuations instructions. If you are advised to evacuate, do so immediately.

### **Prepare for High Winds Ahead of Time:**

- Install hurricane shutters or pre-cut  $\frac{3}{4}$ " marine plywood for each window of your home. Install anchors for the plywood and pre-drill holes in the plywood so that you can put it up quickly.
- Make trees more wind resistant by removing diseased or damaged limbs, then strategically removing branches so that wind can blow through.

### **Know What to do When a Hurricane WATCH or WARNING is Issued:**

- Listen to the advice of local officials, and leave if they tell you to do so.
- Complete preparation activities.
- Pack basic Disaster Supplies in your car if evacuation seems imminent. Be sure to take any essential medications.
- If you are not advised to evacuate, stay indoors, away from windows.
- Be aware, the calm "eye" is deceptive; the storm is not over. The worst part of the storm will happen once the eye passes over and the winds come from the opposite direction. Trees, shrubs, buildings, and other objects damaged by the first winds can be broken or destroyed by the second winds whose force is opposite the first winds.
- Be alert for tornadoes. Tornadoes can happen during and after a hurricane passes over. Remain indoors, in the center of your home, in a closet or bathroom without windows.
- Stay away from flood waters. If you come upon a flooded road, turn around and go another way. If waters are rising rapidly around you, get out of the car and climb to higher ground.

## **Know What to do After a Hurricane is Over:**

- Keep listening to NOAA Weather Radio or local radio or TV stations for instructions.
- If you evacuated, return home when local officials tell you it is safe to do so.
- Inspect your home for damage.
- Use flashlights in the dark; do not use candles.

## **TORNADO**

### **Prepare a Home Tornado Plan**

Pick a place where family members could gather if a tornado is headed your way. It could be your basement or, if there is no basement, a center hallway, bathroom, or closet on the lowest floor. Keep this place uncluttered. If you are in a high-rise building, you may not have enough time to go to the lowest floor. Pick a place in a hallway in the center of the building. **Conduct periodic tornado drills so everyone remembers what to do when a tornado is approaching.**

### **Stay Tuned for Storm Warnings:**

- Listen to your local radio and TV stations for updated storm information.

### **Know what a tornado WATCH and WARNING means:**

- A tornado WATCH means a tornado is possible in your area.
- A tornado WARNING means a tornado has been sighted and may be headed for your area. Go to safety immediately.

### **When a tornado WATCH is Issued:**

- Listen to local radio and TV stations for further updates.
- Be alert to changing weather conditions.
- Blowing debris or the sound of an approaching tornado may alert you. Many people say it sounds like a freight train.

### **When a tornado WARNING is Issued:**

- If you are inside, go to the safe place you picked to protect yourself from glass and other flying objects. The tornado may be approaching your area.
- If you are outside, hurry to the basement of a nearby sturdy building or lie flat in a ditch or low-lying area.
- If you are in a car or mobile home, get out immediately and head for safety (as above).

### **After the tornado passes:**

- Watch out for fallen power lines and stay out of the damaged area.
- Listen to the radio for information and instructions.
- Use a flashlight to inspect your home for damage. Do not use candles at any time.

## **DISASTER PREPAREDNESS: MEDICATIONS**

**Running out of Medications during a Hurricane or an Ice Storm....That would be a disaster!!!** During natural disasters—hurricanes, floods, winter storms—the last thing anyone would want is to run out of medications. Don't take a chance; take a few easy steps today that may save your life tomorrow.

- Always fill prescriptions before they run out.
- Most insurance plans allow you to refill monthly medications 3-7 days in advance. If possible refill early once or twice a year to create an extra supply for emergency situations.
- If you take medications that require a prescription each time, such as Percocet and Ritalin, ask your doctor about writing a special prescription marked for use only during a declared state of emergency in your home area, then store the prescription with your emergency documents.
- Everyone should keep a small Grab & Go Bag, ready to take with you in an emergency. Store your extra medications there, including over-the-counter items such as pain relievers and vitamins, in waterproof zippered bags. Keep each item in its original container and be sure to update twice a year—checking for expired or discontinued medications.
- Everyone should have a detailed list of medications, how they are taken, and who prescribed them. This list should be updated at least twice a year and kept waterproof in your Grab & Go Bag. You should also give a copy of this list to your emergency contact person. Work with your pharmacist or doctor using the guidelines on the back of this page.
- During disaster events, call CARE-LINE at 1-800-662-7030 or 1-877-452-2514 (TTY) for information about emergency services and shelters in your area.
- If you have pets, be sure to include their medications, records, and photos in your Grab & Go Bag.
